

HOW A CONNECTION BROKER MANAGES USERS

By Leostream Corporation

A connection broker provides end users with consistent, reliable access to data and desktops from a wide range of fat and thin clients. There are eight different steps involved in connecting users to desktops. Take a look!

Step 1
User signs into the Connection Broker

Step 2
Connection Broker authenticates user

Step 3
Connection Broker offers resources based on user's policy

Step 6
User ends remote viewer session

Step 5
Connection Broker assigns desktop

Step 4
User requests connection to desired desktop

Step 7
Connection Broker unassigns desktop

Step 8
Connection Broker applies power policy

Resources

Repeat!
